TITLE: Heat insulating laminated plate for wall
materials - comPrises high impact polystyrene outer layer,
ABS layer and (hydrogenated) styrene!-butadiene! block
copolymer intermediate layer

PATENT-ASSIGNEE: ASAHI DOW LTD[ASAF]

PRIORITY-DATA: 1980JP-0064452 (May 15, 1980)

ABSTRACTED-PUB-NO: JP 56161160A

BASIC-ABSTRACT:

High impact polystyrene(HIPS) (A) is used as one outer layer
acrylonitrile-buthadiene-styrene(ABS) (B) copolymer is used as
another outer
layer and styrene-buthadiene blocked copolymer or hydrogenated
styrene-buthadiene blocked copolymer is used as the intermediate
layer (C) to
form a laminated sheet. Pref. the intermediate layer (C) contains up
to 30
wt.% scraps of the laminated sheet composed of (A), (B) and (C)
polymers.
besides styrene-buthadiene blocked copolymer or hydrogenated styrene-
butadiene
blocked copolymer. Pref. thickness ratio of each layer is 70-30%
(A), 10-30%
(B) and 20-40% (C).

The resulting laminated sheet is used as wall material of heat-
insulating box.

The HIPS is prepd. by polymerising a vinyl-substd. aromatic cpd. e.g. styrene, alpha-substd. styrene and nucleus-substd. styrene in the presence of synthetic rubber. The ABS polymer is a terpolymer composed of 16-29 wt.% acrylonitrile, 44-68 wt.% styrene and 10-35 wt.% rubbery polymer. The blocked polymer is obtd. by soln. polymerisation and has 1000-10,000 kg/sq.cm tensile elasticity.
